The Preservation of Species

The Value of Biological
Diversity

Edited by *Bryan G. Norton*

Beginning in late 1981, members of a special multidisciplinary working group held extensive discussion on the preservation of biological diversity on earth. From these sessions emerged a book that addresses two related questions: first, why preserve species, and second, what priorities should govern decisions when there are insufficient funds to save all species?

"Here is a book that takes on the interdisciplinary challenge, with essays from a diverse working group assembled by the Center for Philosophy and Public Policy at the University of Maryland. . . .

The book is not intended to compete with recent texts on conservation biology, but rather it is designed for an audience of interested laypersons, activists, legislators, policymakers, and managers."

—*Reed F. Noss, Conservation Biology*
